Description of the conductor system

The VAHLE Powerail KBH is a shock hazard protected conductor system for indoor and outdoor installations. The plastic housing can accommodate different copper profiles.

Type KBHF: in 4- and 5-conductor version, with preassembled copper conductors and spring loaded connectors from 63 to 100 A.

Type KBHS: in 4- and 5-conductor version, with preassembled copper conductors and bolted joints from 63 to 200 A.

A compact design, corrosion resistance and an easy installation are the main characteristics. The KBH complies with VDE, european and international standards as well as accident prevention regulations. It is protected to IP 23 standards. The KBH can be supplied with sealing strip and heating system. The conductor system with sealing strip is protected to IP 24 standards and EN 60529 (0470, part 1) regulation.

Collectors are touch proof only when fully entered into the conductor system. If there is the possibility to touch live parts by hand, ie. collectors

that might leave the conductor system during operation, provide safety barrier or disconnect mains. This is valid only for a supply voltage exceeding 24 V AC or 60 VDC.

Other cross sections, as shown on page 7, are possible. The upper pole is used as N-conductor if required. The max. copper cross section of the conductor is 26 sqmm. If the cross-section of the N-conductor is smaller than the cross section of the outer conductor, it is necessary to protect it against overcurrent and short-circuit, design according to IEC60364-4-43 (HD 60364-4-43).

Low voltages of max. 50 V AC or 120 V DC are valid if the conductor system is only used as control line (type...SSD). Refer to regulation SELV or PELV (also DIN VDE 0100-410). A ground conductor is required for higher voltages.

TECHNICAL DATA

Applications

For mobile power consumers like cranes, monorails, electric hoists, machine tools, automated storage and retrieval systems, lighting systems.

Approvals

UL-approved

Housing

Color grey, plastic housing for 4 or 5 conductors. Standard section 4 m. Other sections are available. The ground conductor is identified by international color code. Phase reversing prevented by design of the collector and housing. Higher number of conductors possible by combination of several conductor systems.

Couplings

Through plastic joint caps.

Feed sets

Through line feeds or end feeds. When selecting the "overload" protection devices, selection has to be made according to DIN VDE 0100 part 530.

End caps

The open ends of the conductor system are closed by end caps for KBHF and KBHS.

Hangers

Support bracket at the crane track (see page 9). Max. support distance of the conductor at following ambient temperatures:

- Indoor systems and roofed outdoor systems: $\leq 35^{\circ}\text{C} = 2.00\text{ m}$
- Indoor and outdoor systems
with and without heating: $> 35^{\circ}\text{C} = 1.33\text{ m}$
- Cold storage $\leq 0^{\circ}\text{C} = 1.33\text{ m}$
- APOS systems: $-20\text{ up to }+50^{\circ}\text{C} = 1.33\text{ m}$

It is necessary to provide at least one additional hanger on the sections of the feeds (line feeds), removing sections, anti-condensation sections and expansion sections (1 m sections). This prevents any sagging of the conductor conductor system.

Expansion during temperature fluctuation

The expansion sections are required to compensate the different expansions between copper conductors and steel- or concrete structures, in varying temperatures without interrupting electrical power. The different expansions between the plastic housing and the copper conductors will be compensated in every joint.

Anti-condensation sections

These sections are used for transfer of the Powerail to outdoor areas to avoid condensation. The conductor system is not separated electrically.

Contact sections, turntables and switches

Conductor sections for working areas and transfer applications see page 17 and 19.

Sectionalizing

Conductor dead sections are electrical interrupts of the conductor. Under normal operating conditions a cross over with collectors to switch the voltage off or on is only allowed with low power ratings (control current). The conductors can be separated through air gaps (5 mm) or insulating pieces (35 mm). With the air gap the collector carbon bridges the gap, e.g. for mains. The insulating piece is longer than the carbon and each conductor section can be separated electrically, e.g. for control. Double isolating sections are recommended to guarantee safely separated conductor sections as per EN 60204.

Collectors

The current collectors are made of re-inforced polyester fiberglass, for high strength and light weight. Spring loaded carbon brushes maintain uniform contact. Connecting cables and hinged or flexible towing arms included.

The length of the connecting cable may not exceed 3 m if the added overload protection device is not designed for the load capacity of this cable. Refer also to regulation VDE 0100, part 430 and EN 60204-32. (Note: this occurs often with several collectors per system).

Continuity of ground conductor

The continuity of the ground conductor has to be guaranteed as per regulation EN60204-32 for conductor rails.

Runways of lifting devices may not be used as ground conductor, only an additional connection is permissible. Therefore a continuous ground conductor is required.

With following system requirements double collectors have to be used

- as proper measure to fulfil the continuity of the ground conductor system via carbon brushes. Refer to regulation EN 60204-1-2007-06 and EN 60204-32-2009-03.
- Transfers with switches and turntables
- Operational voltage below 50 V
- Frequency controlled drives
- Transmission of signals
- High electrical loads

Removing section for collectors

Assembly and disassembly of the collector is possible at the end of the track as well as at the removing section. By opening and closing the sliders at the bottom of the conductor housing the collector can be mounted and demounted easily. Before opening the removing section the conduc-

TECHNICAL DATA

tor system has to be without voltage.

Safety instructions

It must be ensured that the arrangement of the conductor system provides minimum distances (0.5 m) between fixed and mobile plant parts (i. e. between conductor rails, collector trolleys and towing arms) so as to avoid the risk of pinching.

PLEASE NOTE

For use in galvanizing and pickling plants, under aggressive conditions and low voltage applications we would appreciate receiving detailed information, especially of the environmental conditions.

For quotations and order processing including conductor systems with curves, dead sections, turntables, switches etc. we require your drawings or sketches. Please use our questionnaire, page 32.

Conductor system values: electrical data

Type	Max. continuous current	Nominal voltage (UL)	Dielectric strength	Spec. resistance	Surface resistivity	Leakage resistance
KBH	200 A (at 100 % DC)	690 V (600 V)	IEC 60243-1-3 30–40 kV/mm	IEC 60093 $5 \times 10^{15} \Omega/\text{cm}$	IEC 60093 $10^{13} \Omega$	EN 60112 CTI 400-2.7

Conductor system values: mechanical data

Type	Flexible strength	Tensile strength	Ambient temperature	Flammability	Resistance to chemicals (at 45 °C)
KBH	75 N/mm ² ±10 %	40 N/mm ² ±10 %	–30 °C up to +60 °C	flame retardant, self extinguishing, UL 94 V0	Gasoline, mineral oil, grease, acid sulfur up to 50 %, caustic soda up to 50 % and hydrochloric acid up to 25 %, concentrated

Temperature correction factor f_T

Ambient temperature °C	35 °C	40 °C	45 °C	50 °C	55 °C	60 °C
Correction factor f_T Standard shrouding	1	0.95	0.89	0.84	0.77	0.71

Voltage drop for the conductor

For three-phase current $\Delta U = \sqrt{3} \cdot I \cdot I_A \cdot Z$

For alternating current $\Delta U = 2 \cdot I \cdot I_A \cdot Z$

For direct current $\Delta U = 2 \cdot I \cdot I_A \cdot R$

Z = Impedance [Ω/km]

R = Resistance [Ω/km]

I = Feed length [km]

I_A = Inrush current of installation in amperes

Permissible continuous current of the conductor

$$I_{Dzul,UT} = I_{zul} \times f_T[A] \text{ with } I_{Dzul,UT} > I_{DA}$$

$I_{Dzul,UT}$ = Permissible continuous current of the conductor at ambient temperature

I_{zul} = Permissible continuous current of the conductor at 35 °C (catalogue value) [A]

f_T = Correction factor

CURVES, SEALING STRIP AND CABLE GLANDS FOR FEEDS

Curves

Production corresponding to customer drawing

Min. horizontal bending radius	63–125 A	= 600 mm
	160 A	= 1000 mm
	200 A	= on request

max. $\nless 120^\circ$

min. bending radius, vertical = 2000 mm

max. curved length = 3600 mm

Horizontal curve for SI and SA

SI = Safety-web inside

SA = Safety web outside

Vertical curve for VRO and VRU

VRO = Vertical radius upwards

VRU = Vertical radius downwards

Safety web will be mounted in direction of track.

Changes in measurements of curves have to be mentioned for replacement orders.

Sealing strip (including accessories)

⁽¹⁾ Tolerance ±2.5 %

⁽²⁾ Arrangement of the heating cables on both sides.

We recommend a heating system for outdoor installations and conductor systems in humid plants. The heating consists of two heating cables which are arranged according to the illustration beside.

Attention: Switch on heating system below +5 °C ambient temperature.

The type of heating cable has to be calculated: heat output per heating cable between 20 – 25 W/m.

For longer heating distances the total length has to be divided into different heating sections. For shorter heating distances to feed with lower secondary voltage via transformer.

$$\text{Heating capacity Watt/m: } N' = \frac{U^2}{R \cdot L^2}$$

U = Supply voltage (Volt)

R = Resistance of heating cable (Ohm/m)

L = Length of heating section (m)

HEATING

Layout examples (depending on system situation)

a) 2 heating circuits

b) 1 heating circuit

c) 2 heating circuits

Terminal boxes for heating

Type	Version	Cable gland Measurements see page 13	Order No.
BH-AKB-KBH-L	left end	M25	600155
BH-AKB-KBH-R	right end	M25	600156
BH-AKB-KBH-M	line feed	2 x M25	600065
BH-MA-KBH-MKL/H-LSV/G	1 set material for connecting clamps		195291

For each end feed box 2 sets of material for connecting ends are required.

For line feed you need 4 sets of material for connection ends.

Order for 60 m powerail – example c)

1) 122 m heating cable type H 2.0 (2 x 60 m and 2 x 1 m additional)

Voltage 400 V, two heating circles parallel

heating capacity as per above mentioned diagramm

2x 22 W/m at 60 m 2x 22 W/m ~2640 W = 2,64 kW.

2) 1x junction box left end, 1x junction box right end

3) 4x sets of material for connection ends.

Switch gear assembly and temperature control unit as per customers inquiry.

Fuses, cables etc. have to be provided by the customer.

CONTACT SECTIONS, TURNTABLES AND SWITCHES

Contact section⁽¹⁾

Turntable

Switch

Please submit drawings of transfer applications.

Specify dimensions a , b , c , R and angle α .

$\alpha = 50^\circ$

Max. 20 mm air gap between transfer guides.

To create all parts for contact sections, turntables and switches we require detailed construction drawings.

(1) Contact sections must not be activated before collectors are fully engaged.

TRANSFER FUNNELS

Transfer funnel

Conductor system should not be activated before the collectors carbons have complete contact with the conductors.

Offset:

- max. 10 mm horizontal
- max. 10 mm vertical

Max. speed for crossover of the current collector 60 m/min.

Hints for dimensioning the left-and right hand version refer to page 6 and 7.

REMOVING SECTION

Removing section (incl. 1 m conductor section)

with special bolted joints for KBHF and KBHS on both ends.

Assembly and disassembly of the collector is possible at the end of the track as well as at the removing section.

By opening and closing the sliders at the bottom of the removing section housing the collector can be mounted and demounted easily.

Before opening disconnect mains. The removing section does not disconnect the conductor system electrically.

For single collectors

MAINTENANCE SECTIONS

For maintenance work with KBH systems, collector removal and conductor bar replacement can be easily and quickly achieved with a maintenance section. Maintenance sections conveniently drop out or reinstall at existing runway installations. To obtain best possible accessibility at longer runways we recommend installing several maintenance repair sections at convenient intervals or locations.

ANTI-CONDENSATION SECTION

Anti-condensation section

with special bolted joints for KBHF and KBHS at both ends.

Application of anti-condensation section

The anti-condensation section will be used where conductor systems are passing from indoor to outdoor, preventing condensation of the outside mounted conductor section. The warm air from indoors can escape through the anti condensation section (see sketch). The anti-condensation section does not interrupt the conductor system electrically.

Additional feeds are not required.

Assembly

The anti-condensation section is to be placed directly (0.5 m – 1 m max.) at the transfer point from indoor to outdoor (see sketch).

(1) Also suitable for former 40 A-version

EXPANSION SECTION

Expansion section

The Expansion sections are required to compensate the different expansions between copper conductors and steel- or concrete structures, in varying temperatures without interrupting electrical power.

Expansion joints are used when the conductor length between feeds, curves, switches or other fix points is exceeding 20 m.

Max. length during differences in temperature:

Δt 90 °C (–30 °C up to +60 °C)

Install one expansion joint per 100 m.

An additional expansion joint every 100 m.

Arrangement of fixpoints according to sketches.

The remaining conductor sections have to be arranged in sliding hangers. Additional feeds or current collectors are not required as the expansion-sections do not interrupt electrical power.

Assembly

The gap dimension “a” is 75 mm and is valid for an ambient temperature of –10 °C to +35 °C during installation.

(1) Rest of conductor system to be installed with sliding hangers

SPARE PART LIST

Spare part list for conductor system

Type		KBHF Order No.	KBHS Order No.
VM-KVM	Joint cap (pair)	600005	600005
VM-STV13/63-100 A-KBHF/MKHF ⁽¹⁾	Spring loaded connector 63–100 A	600483	-
VM-SCHV13/63-200 A-KBHS/MKHS/MKLS ⁽¹⁾	Bolted joints 63–160 A	-	262018
VM-SCHV13/200 A-KBHS	Bolted joints 200 A	-	600712
DL-D-KBH-MKH-MKL-TDV	Neoprene sealing strip, in pairs (max. length 40 m each)	600551	600551
DL-V-KSLT-KBH-MKL/H-LSV/G	Coupling for sealing strip, in pairs (for lengths <40 m each)	258300	258300
DL-F-KBH	Fixing clamp for sealing strip (1 per end)	600354	600354
DL-EZRD-KBH	Mounting glider for sealing strip (>10 m system length)	600109	600109
AK-KKE-MKE13/63-80-SO ⁽¹⁾	Feed terminal for end feed (63/80 A)	600006	600006
AK-KSE-KEF-KES13/63-100 A-S-70.2	Feed terminal for line feed (lateral)	600017	600017
AK-KSE-KEF-KES13/63-100 A-O-67.2	Feed terminal for line feed (on top, 5th conductor)	600016	600016

Spare part list for current collector

Type		KSW / DKSW Order No.	KSWS Order No.
SK-KSW-MSWA-PH/SU-28	Carbon brush phase (lateral)	600088	600088
SK-KSW-PH/O-28	Carbon brush 5th conductor (top)	600089	600089
SK-KSW-MSWA-PE/S-28	Carbon brush ground (lateral PE)	600090	600090
SA-KF-KSW-MSWA-SP	Carbon pressure spring (standard), suitable for all carbon brushes	600338	600338
TR-DKSW-SB310	Connecting bar for double collector DKSW	600105	-
SA-ZB-AS-KSW-P-250	Assembly kit KSWs	-	600106
SA-ZB-DG-KSW-S	Sealing strip slide plate for collectors KSW	600640	600640

Cleaning accessories on request

(1) Also suitable for former 40 A-version

APOS POSITIONING SYSTEM

were developed for automated handling systems in material flow technology.

The control system can constantly query the absolute position of the mobile consumer.

The APOS Positioning system can be used in connection with the VAHLE Powercom® data transmission system.

Features

- absolute position determination up to and 262 m
- Systems for exceeded lengths on request
- Space-saving solutions for integration into the powerail system or for installation in parallel to the runway
- retrofittable
- absolute position immediately available when switching on or after a power failure
- reliable position detection even in humid or dusty environments
- trouble-free functionality even in poor lighting conditions
- travel speed up to 250 m/min
- no wear (contactless)

For more information see our catalog VAHLE APOS® (7a)

VAHLE POWERCOM®

VAHLE Powercom®-Data transmission systems in conjunction with VAHLE conductor bars or sliprings were developed for automated handling systems in material flow technology. They enable the uninterrupted and cost effective data transfer between the central control system and the accompanying automation devices on the conveying vehicles. The VAHLE Powercom® data transmission system can be used in connection with the VAHLE Powercom® data Transmission system.

VAHLE Powercom® 485

- RS 485 Interface (transparent protocol)
- to be used in various BUS-Systems.
- Transfer rate 19.2 kbps

For more information see our catalog VAHLE Powercom® (6a)

Example of use

- ① VAHLE Powercom®
- ② VAHLE Powercom® Double filter
- ③ VAHLE Powercom® Terminal resistance

QUESTIONNAIRE

Company: _____ Date: _____
 Phone: _____ Fax: _____
 Email: _____ Website: _____

1. Number of conductor system installations: _____
2. Type of equipment to be powered: _____
3. Operating voltage: _____ Volt Frequency: _____ Hz
☐ Three-phase voltage ☐ AC voltage ☐ DC voltage
4. Track length: _____
5. Number of conductors: _____ neutral: _____ control: _____ ground: _____
6. Mounted position of conductor system:
☐ Conductor system pendant, collector cable facing to the bottom ☐ Conductor system pendant, lateral payout of conductor cable⁽¹⁾
☐ Support distance _____ m (max. 2 m) ☐ Other: _____
7. Number of consumers per system: _____
8. ☐ Indoor system ☐ Outdoor system
9. Other operating conditions (humidity, dust, chemical influence, etc.) _____
10. Ambient temperature: _____ °C min. _____ °C max.
11. Hall expansion joints _____ pieces _____ expansion max.
12. Position and number of feeding points⁽¹⁾: _____
13. Position and number of isolating sections (e.g. for maintenance)⁽¹⁾: _____
14. How will the conductor be arranged?⁽¹⁾: _____
15. Brackets required: ☐ Yes ☐ No c/c distance beam/conductor system: _____
16. Travel speed: _____ m/min. in curves: _____ m/min. at transfers: _____ m/min.
17. Max. voltage drop from the conductor system feed point to the consumer considering starting current. _____
18. Power consumption of the individual consumer loads: _____

Motor data	Crane 1							Crane 2						
	Power kW	Nominal current			Starting current		Type of motors ⁽²⁾	Power kW	Nominal current			Starting current		Type of motors ⁽²⁾
		A	cos φ _N	% duty	A	cos φ _A			A	cos φ _N	% duty	A	cos φ _A	
Hoist motors														
Auxiliary hoist														
Long travel														
Cross travel														

Mark with * those motors which can run simultaneously.

Mark with Δ those motors which can start up simultaneously.

Further remarks: _____

Signature: _____

(1) For curved tracks, powerail with isolating sections etc., we require sketches to enable us to prepare a quotation

(2) Use: K for squirrel cage motor, S for slipring motor, F for frequency controlled motor

We reserve all rights to make alterations in the interests of further development

Please copy and fill in the questionnaire.
